

Macquarie Managed Backup for Azure Data.

When it comes to data protection,
experience matters.

As one of the most accredited cloud service providers in Australia, Macquarie has been providing data protection services to corporate and government customers for **over 20 years**.

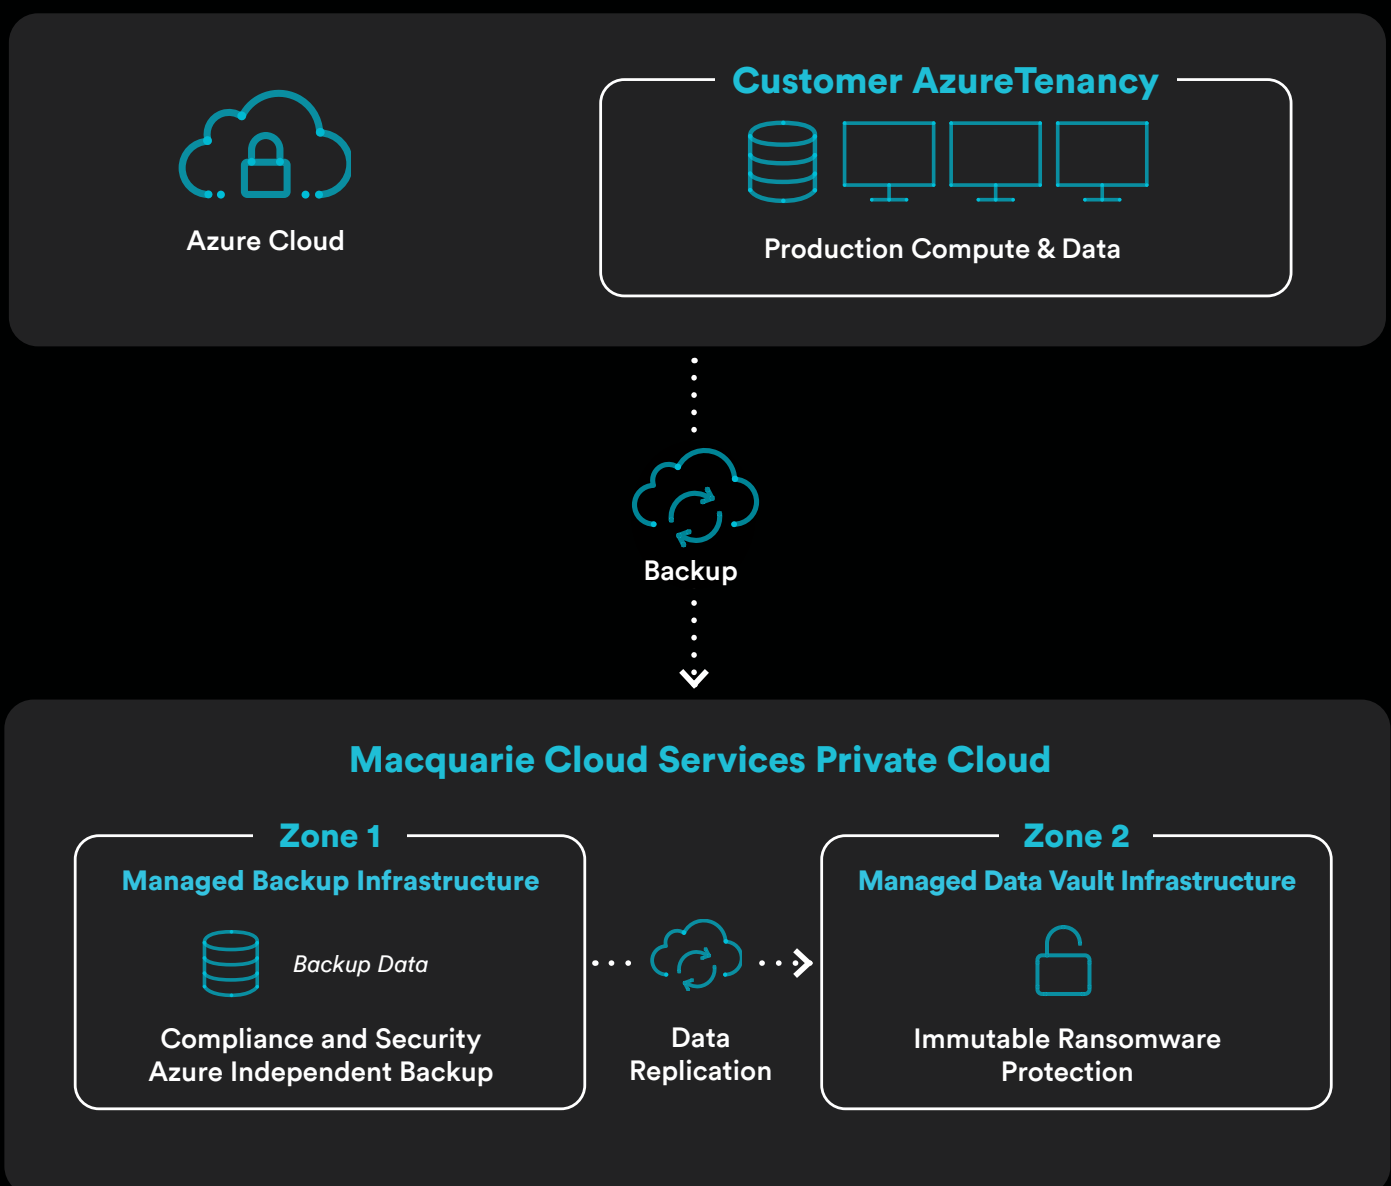

Macquarie currently manages over **110,000 backup jobs per month** and protects over **150 PetaBytes of data**, with **24x7 monitoring and service**.

Best practice for data protection is to secure data in a completely independent and isolated location to production data.

This is why regulatory and compliance standards like APRA and Sarbanes Oxley stipulate strict controls for data protection.

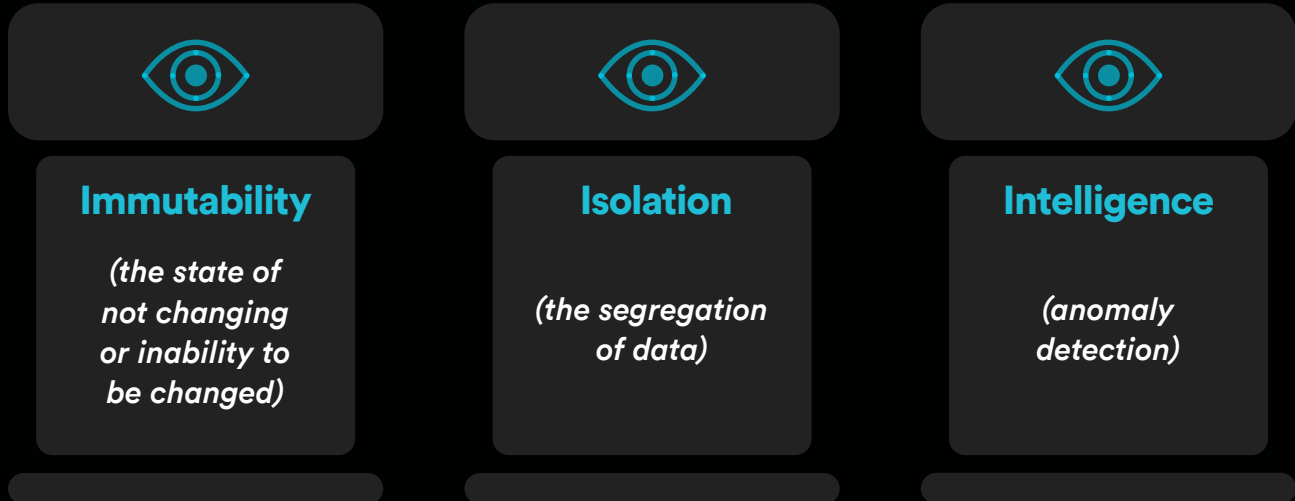

Macquarie Cloud Services offers a fully managed BaaS solution to backup and protect Azure data in an independent and secure location and meet regulatory compliance standards.

How it works.

An additional layer of Cyber and Ransomware protection can be applied using the managed Data Vault solution in a separate cloud protection zone.

Using the 3 I's best practice methodology as illustrated below, customer data is very well protected against malicious cyber activity.

Compliance Standards covered by Macquarie Managed Backup for Azure Data.

The Essential Eight Maturity Model - Australian Signals Directorate (ASD)

Backups are stored online or offline, but in a non-erasable and non-rewriteable manner

CPS 234 (APRA)

Controls to protect backups from compromise

Sarbanes-Oxley Act

Controls to protect backups from compromise
