macquarie CLOUD SERVICES

Don’t let AI outpace your security.

Govern AI use, protect your data and reduce cyber risk with Managed Global Secure Access.

AI is opening up new ways to work and get more done. It can also introduce new risks to your business if the right controls aren’t in place.

As AI use grows across your organisation, security teams need visibility into how it's being used, stronger controls to protect sensitive information and clear governance to stay ahead of emerging risks.

Macquarie Cloud Services brings these capabilities together in a managed service that combines Microsoft’s industry leading security technologies with 24x7 monitoring and response from our Australian-based Security Operations Centre (SOC).

A better way to manage AI.

AI is moving quickly across every part of the business. Keeping up means understanding how it's being used, protecting sensitive information and making sure the right controls are in place.

Governance and compliance

Strengthen AI governance and support compliance with policy control and real-time dashboards for executives, operations and security.

Know what's happening

Manage and control access to AI tools across your organisation, including unsanctioned apps and Shadow AI usage.

Protect sensitive data

Prevent confidential information from being shared through AI prompts, uploads and connectors.

Reduce cyber risk

Protect against prompt injection, identity attacks, token theft and AI-driven threats.

Protect every user

Apply consistent security controls whether people are in the office, working from home or on the road.

macquarie CLOUD SERVICES

End-to-end AI security and governance.

AI introduces two distinct security challenges for every organisation. You need to govern how AI is used across your organisation while protecting your business from AI-driven threats.

The first is governing how people use AI. The second is defending against attackers who are now using AI themselves. Macquarie Cloud Services helps you stay ahead on both fronts.

Managed Global Secure Access gives you visibility and control over AI use across your organisation. Managed XDR detects and responds to AI-powered threats.

They're two standalone managed services designed to work together, giving you stronger governance and protection as AI becomes part of everyday business.

Managed Global Secure Access

Governs how AI is used across your organisation.

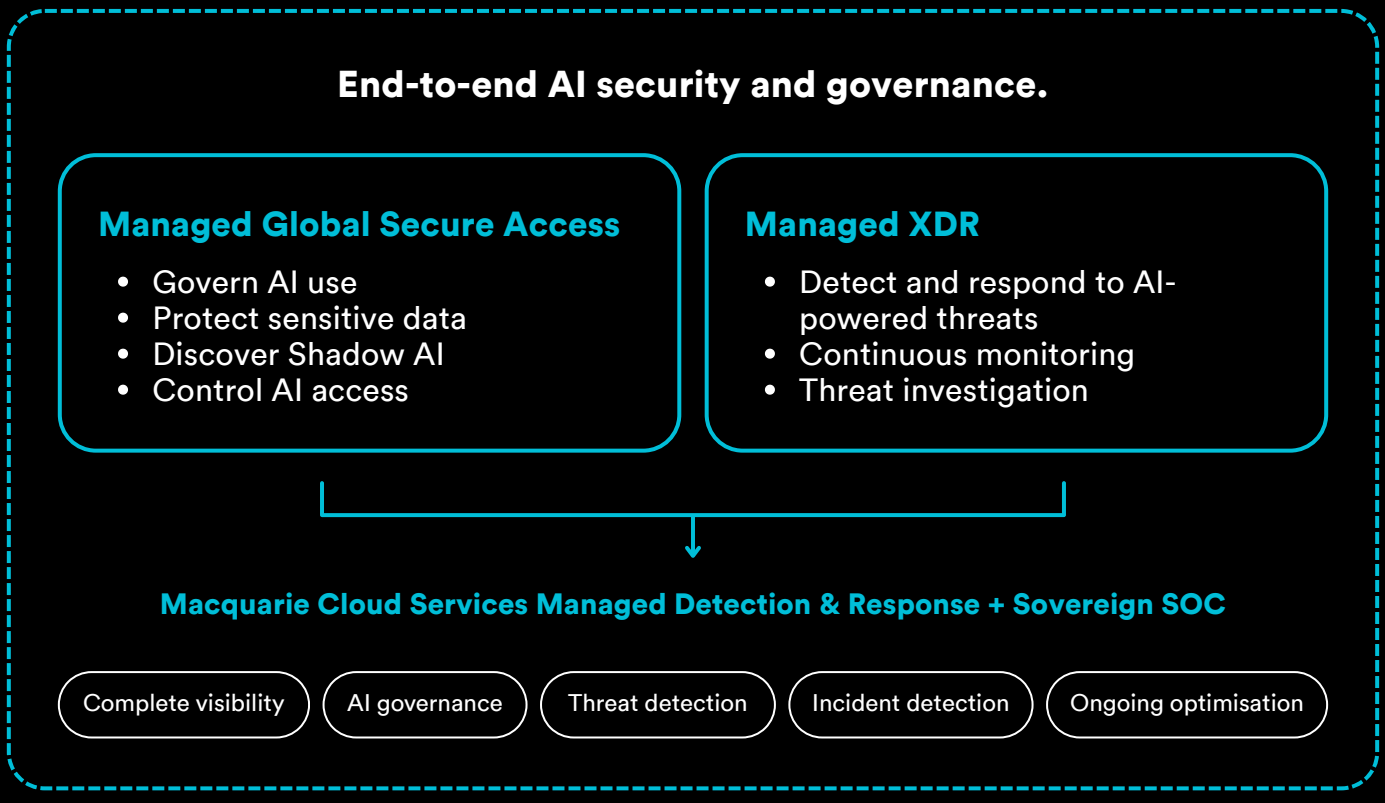

- Control access to AI applications
- Discover and manage Shadow AI
- Protect sensitive information
- Apply security policies wherever people work

Managed XDR

Protects your organisation from AI-driven threats

- Detect and respond to AI-powered attacks
- Continuous monitoring from our 100% sovereign SOC
- Threat intelligence and incident investigation
- Automated response to emerging threats

Together, they deliver complete AI security across your people, identities, applications, network and data.

Why Macquarie Cloud Services.

As a leading Microsoft partner, we bring the expertise, technology and ongoing support you need to to secure AI in your organisation.

Microsoft security expertise

Azure Expert MSP and Microsoft Intelligent Security Association member with deep Global Secure Access, Defender XDR and Sentinel capability.

Industry-leading customer experience

With an NPS of +90, we're committed to delivering the responsive, accountable service our customers expect.

24x7 Australian support

Onshore analysts provide continuous monitoring, investigation and guided response from our sovereign SOC.

Security you can trust

From ISO 27001 to PROTECTED certification, we meet the highest standards for security and compliance.

Trusted by leading organisations.
