CLOUD SERVICES

Secure access starts with Zero Trust.

Give your people secure, Zero Trust access to corporate resources wherever they connect with Managed Global Secure Access by Macquarie Cloud Services.

Your people need quick, easy access to the applications and resources that keep work moving. Traditional VPNs can make that harder than it needs to be, while giving users access to more of your network than they actually need.

Managed Global Secure Access gives you a smarter way to connect. With Zero Trust built in, the right people get access to the resources they need, while everything else stays out of reach.

Macquarie Cloud Services manages it for you, reducing your attack surface while giving you a more secure alternative to ageing VPN and VDI solutions.

Put Zero Trust to work.

Giving people access to the resources they need shouldn't mean opening up your network along the way. Managed Global Secure Access puts Zero Trust into practice, checking every connection and keeping access tightly focused on what each person actually needs.

Give people access to what they need

Connect users directly to the applications and resources they're authorised to use, without giving them access to the wider network.

Keep more of your network out of reach

Reduce your external attack surface by keeping corporate resources away from the public internet and harder for attackers to find.

Don't let a stolen login open the door

Use signals such as identity, device health and risk score to decide the right level of access.

Move on from the VPN

Give people a faster, more secure way to connect, without relying on ageing VPN infrastructure or routing them through your corporate network.

See exactly who can access what

Get a clearer view of access across your environment, so you can tighten permissions and deal with access that no longer makes sense.

Buy time when patching falls behind

Limit access to vulnerable resources and reduce their exposure while your team works through outstanding patches and remediation.

macquarie CLOUD SERVICES

Make every connection more secure.

Your people need to get into the applications and resources they use every day. You want them to get there easily, without opening up the rest of your network in the process.

Managed Global Secure Access makes that possible. It checks each connection and gives people access to what they're authorised to use, while keeping everything else out of reach. If something looks risky, access can change with it.

And if a threat does make it through, our Managed XDR is watching 24x7, with our Australian Security Operations Centre (SOC) ready to investigate and respond.

Managed Global Secure Access

Puts Zero Trust into every connection

- Connect people directly to the resources they need
- Check identity and device risk before granting access
- Keep private resources away from the public internet
- Tighten access when risk changes
- Move beyond ageing VPN and VDI solutions
- Eliminate lateral movement

Managed XDR

Keeps watch when something doesn't look right

- Detect threats across your environment
- Monitor activity 24x7 from our 100% sovereign SOC
- Investigate suspicious behaviour
- Respond quickly when a threat is found

Together, they give your people an easier way to connect while giving you much tighter control over what they can access.

Zero trust access, backed by 24x7 protection.

Managed Global Secure Access

- Zero Trust Access
- Control who can access what
- Check identity and device risk
- Keep private resources protected
- Reduce network exposure

Managed XDR

- Detect cyber threats
- Continuous monitoring
- Threat investigation
- Incident response

Macquarie Cloud Services Managed Detection & Response + Sovereign SOC

Zero trust access | Reduced attack surface | Threat detection | Incident detection | 24x7 support

macquarie CLOUD SERVICES

Why Macquarie Cloud Services.

As a leading Microsoft partner, we make it easier to put Zero Trust into practice, backed by the expertise and ongoing support of our Australian team.

Microsoft security expertise

Azure Expert MSP and Microsoft Intelligent Security Association member with deep Global Secure Access, Defender XDR and Sentinel capability.

Security you can trust

From ISO 27001 to PROTECTED certification, we meet the highest standards for security and compliance.

24x7 Australian support

Onshore analysts provide continuous monitoring, investigation and guided response from our sovereign SOC.

Industry-leading customer experience

With an NPS of +90, we're committed to delivering the responsive, accountable service our customers expect.

Trusted by leading organisations.
